

A common way to become familiar with algorithms is called turtle graphics: You instruct a robotic turtle to walk a specific path via instructions like "Turn left," "Walk forward 10 steps", or "Pen down" (to draw a line while walking).

The 8-instruction algorithm shown below ("forward 50," "right 90", etc.) draws a square.

Go to [Turtle Academy](#) to run the program.

Can you modify the instructions to draw a triangle?

Hint: "Forward 100", "Left 120", "Forward 100", "Left 120" -- keep going!

Experiment to see what else you can draw.
